+91 7008183804

Thane West, Maharshtra

Activities

- Singing
- Painting
- Drawing
- Cooking
- Photography
- Gardening

Education Background

- Masters in Computer Science
  7.7 / 10 GPA
  Completed in 2019,
  Utkal University

Soft Skill

- Problem-solving mindset
- Clear communication
- Fast learner and adaptable
- Team collaboration
- Analytical thinking

About Me

Flutter developer with 4 years of experience building scalable, performant, and production-ready mobile applications. I have a strong command of Dart and Flutter with hands-on experience working on large-scale, modular projects in both startup and enterprise environments. My expertise spans across multiple architectural patterns and state management approaches, allowing me to design flexible and maintainable solutions tailored to business needs. Passionate about clean code, UI/UX excellence, and continuous learning, I actively contribute to open-source and enjoy solving complex problems.

Hard Skill

- Flutter & Dart
- State management: BLoC, Provider
- Design patterns: Clean Architecture, MVVM, Singleton, Factory
- SOLID principles
- Performance tuning
- Unit, widget, and integration testing
- Backend: Firebase, MongoDB
- Version control: GIT
- API: RESTful services integration
- Local DB: SQFlite, Hive, Nest DB

Achievements

- 2021 – 2022: Built 2 full-featured apps in 4 months — live on the Play Store
- 2022 – 2024: Successfully delivered and maintained 4 concurrent Flutter projects at scale
- **Open Source**: **Author of 5 Flutter packages on pub.dev:**
- flutter_env_config
- nest_db
- image_scope
- formgaurd
- snackify

Professional Experience

Telemerge IT Services Pvt. Ltd. | Flutter Developer (Mid Senior)

2025 – Present

Enterprise Mobile Banking Application

- **Description:** A modern, enterprise-scale mobile banking application developed for a leading financial institution to offer customers secure and seamless access to digital banking services. The app is built with a Mono Repo Multi-feature architecture, allowing modular code management and scalability. One of the core features includes a fully digital ReKYC (Re-Know Your Customer) module, enabling users to update their personal and professional information remotely using their mobile device.

- **Technologies Used:** Flutter, MobX (for state management), REST APIs (backend integration), Mono Repo Multi-feature Architecture, and unit testing frameworks.

- **My Role:** Worked on the development of the ReKYC module, implementing responsive UI screens for updating personal, professional, and address-related details. Integrated REST APIs for secure data submission and retrieval. Wrote test cases to ensure functional accuracy and collaborated with cross-functional teams to resolve bugs, enhance performance, and maintain enterprise-level development standards.

Key Responsibilities

- Designed and implemented responsive, user-friendly UI screens in Flutter for the ReKYC flow.
- Enabled real-time data exchange by integrating REST APIs for submitting KYC details.
- Utilized MobX for state management to handle form states and asynchronous operations efficiently.
- Ensured code quality and reliability by writing comprehensive unit and widget tests.
- Investigated and resolved performance and usability issues to improve the user experience.
- Collaborated with backend, QA, and design teams to deliver features as per business requirements.
- Followed architectural best practices using Mono Repo Multi-feature setup to ensure scalability and maintainability.

TNS Mobile Solutions | Frontened Developer

2021 – 2024

Nigam Lahari

- **Description:** Developed a feature-rich music streaming app that includes real-time lyrics display. Users can search for songs, create playlists, and enjoy seamless playback with synchronized lyrics.

- **Technologies Used:** Flutter, Firebase (for database and authentication), AudioPlayer package (for playback), and Lottie animations (for engaging UI).

- **My Role:**
- Designed and implemented an intuitive UI with stunning animations.
- Integrated lyrics synchronization and search functionality.
- Optimized audio playback performance and ensured smooth user experience across Android and iOS devices.

TNS Health & TNS Health Provider

- **Description:** Built a comprehensive healthcare app enabling patients to book appointments, view prescriptions, and consult doctors through video calls. The app also provided doctors with patient management features like reports and schedules**.**

- **Technologies Used:** Flutter, Agora RTC (for video calls), Firebase Firestore (for real-time data), and REST APIs.

- **My Role:**
- Created a responsive UI for both patient and doctor workflows.
- Implemented secure authentication and data management with Firebase.

My Med Store

- **Description:** Developed a web and mobile app to manage medicine inventory for pharmacies and distributors. Features included stock tracking, low-stock alerts, and sales reports.

- **Technologies Used:** Flutter Web, Firebase Storage, MongoDB (for backend), and Node.js (for APIs)**.**

- **Your Role:**
  - Implemented real-time inventory tracking and search functionality.
  - Designed clean UI components for stock management and reporting.
  - Collaborated with backend developers to ensure seamless data synchronization.

NSS Puri & NSS Puri

- **Description:** Created an app for religious organizations to manage devotee details, donations, and event registrations. The app included notifications for upcoming events and personalized messages for devotees.

- **Technologies Used:** Flutter, Firebase Push Notifications, and SQLite (offline storage).

- **My Role:**
  - Designed and developed user-friendly forms for devotee registration and donation tracking.
  - Added push notifications for event reminders and updates.
  - Optimized the app for offline and online usage.

Habbit Tracker

- **Description:** Built a productivity app to help users manage tasks with reminders, categories, and priority levels. It also provided analytics to track task completion.

- **Technologies Used:** Flutter, SQLite (local database), and Google Analytics.

- **My Role:**
  - Developed a sleek and easy-to-use interface for task management.
  - Implemented recurring reminders and priority sorting.
  - Analyzed user feedback to enhance app functionality and usability.

Key Responsibilities

AlgoriSoftyresearch.com

- Developing High-Quality Mobile Applications:
- Designed and delivered scalable, user-centric apps across multiple platforms using Flutter. Maintained clean architecture and reusable code for long-term projects.
- Collaborating with Cross-Functional Teams:
- Worked closely with designers, backend developers, and stakeholders to align project goals and deliver successful outcomes.
- Writing Clean, Maintainable, and Well-Documented Code:
- Followed best practices for code structure and documentation, ensuring seamless handovers and future scalability.
- Staying Up-to-Date with Emerging Trends and Technologies:
- Regularly researched new Flutter packages and tools to improve app performance and user experience.
- Testing and Quality Assurance:
- Conducted thorough testing to ensure apps were bug-free and met user requirements before deployment.
- Continuous Improvement and Optimization:
- Actively analyzed app performance and user feedback to implement updates and optimize functionality.
